

# SMART WATER SYSTEM

**OUR SMART WATER SOLUTION HAS BEEN DEVELOPED TO ALLOW HOME OWNERS AND BUSINESS OWNERS TO MANAGE THEIR WATER CONSUMPTION, AS WELL AS BILLS.**

If you can measure your water consumption, you can manage it. Our system can easily, and at reasonable cost, be attached alongside the traditional municipal meter without interfering with it. The Smart Water System collects and transmits your data, which in turn is made available to the user in an easy to interpret visual format. This information is available anywhere

and at anytime.

This information empowers you to measure exactly how much water your household or business uses.

The system allows you to check consumption over particular hours or which activities consume the most. You will be able to predict water usage for the next period and make adjustments to your daily routine to save more water, thereby reducing your monthly expenditure.

**IMAGINE THE IMPACT TO OUR NATURAL RESOURCES IF WE ARE ALL ABLE TO MANAGE AND MEASURE OUR WATER CONSUMPTION?**

## MEASURE

- Digital Flowmeter
- Water Temperature
- Additional Flowmeters (Garden, Bathroom, Kitchen)

## MANAGE

- Manage Usage (30min Reporting Cycle)
- Tiered Costs allow for Bill Management

## MAINTAIN

- Leak Detection for your Geyser and Pipe
- Shut-off Valve for Emergency Situations
